Products available in:

6 kg tank

25 kg tank

## AA

The amino acid complex particularly rich in Glutamic Acid, in addition to being a precursor for the synthesis of all the other essential amino acids, increases the synthesis of chlorophyll, regulates the stomatal opening and increases the fertility of the pollen.

The totally vegetal origin of the Amino Acidi contained in the ED & F Man products allows its application without any restriction on all edible parts of the crops.

## BT

Glycine Betaine belongs to the family of osmoregulating substances, produced by plants in situations of thermal, water and salt stress. This peculiarity makes Glycine Betaine essential in the critical phases of crop development: Germination, Fruit Setting, Enlarged Fruits and Maturation.

The Glycine Betaine contained in the ED & F Man products is extracted exclusively from sugar beet without any added chemical additives.

## GLY

Mainly made of sucrose, they are easily absorbed by the plant as they are made up of simple carboxylic chains. They help to convey other elements within plant tissues and at the same time provide energy to cultivated plants. In the soil they favor the development of useful micro-organisms contributing to plant well-being.

The sugars contained in the ED & F Man products are extracted from plant tissues (beetroot and sugar cane).
